Netcare Pretoria East Hospital has recently launched an innovative Robotic Colorectal Cancer Surgery Program, headed by the accomplished Dr. Heyns. This groundbreaking program focuses on utilizing the state-of-the-art DaVinci Xi robotic system from Intuitive to perform low rectal cancer surgery and pelvic organ prolapse surgery.

Dr. Heyns has completed rigorous training, equipping him with the necessary expertise to operate the DaVinci Xi system effectively. This cutting-edge robotic platform provides enhanced precision, control, and visualization during surgical procedures, revolutionizing the field of colorectal surgery.

The program specifically targets low rectal cancer surgery, which can be a complex and challenging procedure. By employing the DaVinci Xi system, Dr. Heyns can achieve superior dexterity and maneuverability in accessing hard-to-reach areas, facilitating meticulous tumor removal while minimizing trauma to surrounding healthy tissue.

Furthermore, the program also offers robotic pelvic organ prolapse surgery, a common condition that affects many women. By utilizing the DaVinci Xi system, Dr. Heyns can provide patients with a minimally invasive approach, resulting in reduced pain, shorter hospital stays, and quicker recovery times.

The Robotic Colorectal Cancer Surgery Program at Netcare Pretoria East Hospital represents a significant advancement in surgical techniques and patient care. With Dr. Heyns at the helm and the cutting-edge capabilities of the DaVinci Xi robotic system, patients can expect improved outcomes, reduced complications, and enhanced quality of life.
